

## How Do Perfume Pheromones Affect Us?

**W**e all enjoy different types of scents and associate them with a variety of things, for example, we often link lavender to relaxation. Many use perfume in various ways to be able to enhance the smell of a room, clothes and even our body. Perfume is extracted from plants and flowers and it triggers different senses in order to induce a mood or mindset. Plants also carry pheromones, which are transported in the perfumes and to our senses to bring about the desired reaction.

Insects, animals and plants mostly use **pheromones** to attract the opposite sex and this is not very different in human beings. People use perfume in order to smell better, be liked or be attractive for their spouse. We often see commercials where a scent or perhaps new scent is being promoted because irresistible in order to the opposite sex whenever used; technically however, it's the perfume pheromones that make it happen.

Pheromones are chemicals released by a living organism to attract the opposite sex and it exists naturally in perfumes through the plant extract from which the scent is made. You will find that some perfume pheromones are stronger than the others and thus, you may like a perfume on your partner better than the other, it is purely a matter of choice in smell.

### How to Choose the Best Scent for You

You will find perfume pheromones in every bottle; the only thing you need to decide is which type of scent you like or what one your partner enjoys most. Some people are allergic to strong perfume especially if they have allergies to flower pollen. If your partner is allergic to be able to perfume you can still get perfume pheromones in order to make yourself attractive by using scented lotion in an aroma that he or she enjoys.

“

**What Exactly Are Pheromones And Why Do People Wear Them** These pheromones are chemicals that cause others to react different ways to the wearer. They are bottled in both male and female types of these chemicals. This is done to get those around you in social situations to respond differently to...

Pheromones Pheromones Attract

Lotions bring very little amount of perfume in them but because one usually applies it right after showering it makes its way into the pores while they are still open and therefore the scent will stay on longer even if it does not smell stronger.

### Use Layering With Regard to Long Lasting Scent

Many people have trouble holding a perfume on their skin for long periods of time and also half way through an evening they need to refresh the scent. You can do so inside two ways; either carry a purse size perfume or use layering to hold down a scent. Layering is done by making use of the perfume lotion first on our bodies as soon as you step out of the shower and then apply the perfume on the heartbeat points; this would last for at least eight hours. Also choose perfume and not eau de toilette because the former is stronger and thus longer lasting. Enjoy the scent pheromones!
